New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.

Claim 12; Page 80; 149pp; English.

The present invention describes an isolated peptide (I) that binds to and

                have cytostatic, hepatotropic, antiinflammatory, hypotenaive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung, liver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary, skin, head and neck, oesophagus, bone, marrow or blood, and diseases of necovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemangionas and diabetes. The present sequence represents a specifically claimed VEGFR-3 binding peptide from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes an isolated peptide (I) that binds to and inhibits vascular endothelial growth factor receptor 3 (VGGRR-3). (I) have cytostatic, hepatotropic, antiinflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and tracting disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to novel isolated polypeptides comprising a sequence that binds an immunoglobulin Fc region. The polypeptides are useful as binding molecules for detecting, isolating or purifying immunoglobulin Fc-region polypeptides present in a solution, e.g. whole blood, plasma or transgenic milk. The Fc-region binding polypeptides are also useful for regulating or preventing an antibody response, or for increasing the half-life and over all stability of a therapeutic or diagnostic compound that is administered to or enters the circulatory system of an individual. This sequence represents an Fc region binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Immunoglobulin Fc region, binding; whole blood, plasma; transgenic milk; antibody response; half-life; stability; circulatory system.
liver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary skin, head and neck, oesophagus, bone, marrow or blood, and diseases of neovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemangionas and diabetes. The present sequence represents a specifically claimed VBGFR-3 binding peptide from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New polypeptides, useful as binding molecules for detecting, isolating purifying immunoglobulin Fc-region polypeptides present in a solution, for regulating or preventing an antibody response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of evaluating sample by providing a soluble serum protein (I), one or more compounds physically associated with (I), and a (I)-binding agent that comprises a peptide that specifically binds to (I), allowing the (I)-binding agent to bind to to form a complex including one or more compounds physically associated waith (I), separating the complex from one or more components of the sample, and evaluating one or more of the physically associated compounds. The sample comprises blood or serum, or is obtained from a biopsy. The sample may also be obtained from a tumour or a region within $5 \text{ mm of a tumour.} The method is useful for detecting modulators that modulate interaction of serum protein-binding compound and serum protein and for identifying binding ligands for serum protein. The present sequence represents a serum albumin-binding peptide identified using the
                                                                                                                                                                                                                                                                                                                                                                                                                                            Evaluating sample comprising soluble serum protein by forming complex comprising serum protein and physically associated compounds using peptide ligand that specifically binds with proteins, which is separated and evaluated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

the invention fractace to an isolated militarization where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a promoter operably linked to the nucleic acid encoding a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated or polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting callular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway capacined for proliferation, or that inhibits callular proliferation; (8) identifying a gene required for callular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound activity, all a culture compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound activity; (11) aculture compound that inhibits the extent to which each of the strains is present in a culture or collection of proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for proliferation of an organism. The antisense mucleic acids are useful for dencing and aciditar proliferation of an organism. The aciditar proliferational aciditary proliferation of an organism. The aciditar proliferational aciditary proliferation of an organism. The aciditar proliferational aciditary proliferation of an organism. The aciditary proliferation aciditary proliferation of an organism. The aciditary proliferation aciditary proliferation of an organism to some aciditary proliferation of an organism to some aciditary proliferation aciditary proliferation of an organism to some aciditary prolif
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                 screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of
the target prokaryotic essential genes. Note: The sequence data for this
patent did not form part of the printed specification, but was obtained
in electronic format directly from WIPO at

The invention relates to an isolated nucleic acid derived from concocus faccium encoding an Enterococcus faccium polypeptide having the Enterococcus faccium polypeptide having cone of 10 fully defined sequences given in the (or comprising 40 sequential nucleotides chosen from any of the nucleic acids, its complement or sequences hybridising to it). Also included are a crecombinant vector comprising the nucleic acid operably linked to transcription regulatory element, a cell comprising the vector and a single-stranded probe comprising the nucleic acid. The nucleic acids are chosen from 3654 disclosed sequences encoding 3654 disclosed proteins. The nucleic acids is useful for diagnosing pathological conditions resulting from E. faecium bacterial infection (e.g. urinary tract infection) and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans infection and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans and vaccines containing the nucleic acid are useful for preventing or treating Enterococcus faecium infections. The present sequence represents one if the disclosed E. faecium proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, prenatal diagnosis, dermal lesion, cardiovascular disease, MRP6, Multidrug Resistance-associated protein 6; macular degeneration, ABCC6, ATP-binding cassette transporter, arterial insufficiency; chromosome 16; Pseudoxanthoma elasticum, PXE; heritable disorder; retinal haemorrhage;
                                                                                                                                                                                                                     New isolated nucleic acid derived from Enterococcus faecium encoding an Enterococcus faecium polypeptide useful for detection, prevention and treatment of a pathological condition resulting from a bacterial

The invention relates to methods and compositions for diagnosing and treating Pseudoxanthoma elasticum (PXE) and PXE associated physiological dysfunctions. The invention is useful for screening for the presence of a Gysfunctions. The invention is useful for screening for the presence of a C PXE mutation. Mutations associated with PXE maps to the ATP-binding cassette transporter ABCC6 (MRP6-Multidrug Resistance associated protein-co grouped into three transmembrane containing 17 membrane-spanning chalces grouped into three transmembrane domains. PXE is inherited as an autosomal recessive phenotype or appears as a sporadic phenotype. PXE is a heritable disorder characterised by mineralisation of elastic fibers in Skin, arteries and the retina, that result in dermal lesions with associated laxity and loss of elasticity, arterial insufficiency, cardiovascular disease and retinal haemorrhages leading to macular degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PXE individuals in order to identify individuals with appropriate genetic counselling in view of the PXE status. The methods are useful for identifying homozygotes, compound heterozygotes or carriers and thus are useful in the area of genetic testing, carrier detection and prenatal canding nearest sequence is human ATP-binding cassette (ABC) transporter, ABCC6 (MRP6) truncated mutant which is obtained as the human ATP-hiding carrier feetived from human ATP-hiding represent PATP human ATP-hiding reserved to MRP6 protein. Note: The human ATP-hiding represented the presented represented mutant which is obtained as the human ATP-hiding represented represented represented mutant which its derived from MTP human ATP-hiding represented represented mutant and a protein for human ATP-hiding represented the presented represented mutant which its derived from MTP-hiding ATP-hiding reserved to the ATP-hiding reserved to the ATP-hiding reserved to the ATP-hiding reserved to the ATP-hiding reserved
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mouse; prenatal diagnosis; dermal lesion; cardiovascular disease; MRP6; Multidrug Resistance-associated protein 6; macular degeneration; ABCC6; ATP-binding cassette transporter; arterial insufficiency; chromosome 16; Pseudoxanthoma elasticum; PXE; heritable disorder; retinal haemorrhage.
                                                                                                                                                                                                                                                                              Screening presence of Pseudoxanthoma elasticum mutation useful for identifying homozygotes, compound heterozygotes or carriers involves determining presence of mutation in MRP6 (ABCC6) nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mouse ATP-binding cassette transporter ABCC6 (MRP6) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 44; DB 4; Length 1140; Pred. The invention relates to methods and compositions for diagnosing and treating Pseudoxanthoma elasticum (PKE) and PKE associated physiological dyfunctions. The invention is useful for screening for the presence of a PKE mutation. Mutations associated with PKE maps to the ATP-binding or cassette transporter ABCC6 (MRP6-Multidrug Reaistance associated protein-correct in coated in the plasma membrane containing 17 membrane spanning contosomal recessive phenotype or appears as a sporadic phenotype. PKE is autosomal recessive phenotype or appears as a sporadic phenotype. PKE is autosomal recessive phenotype or appears as a sporadic phenotype. PKE is a heritable disorder characterised by mineralisation of elastic fibers in skin, arteries and the retina, that result in dermal lesions with associated laxity and loss of elasticity, arterial lesions with associated laxity and loss of elasticity, arterial insufficiency.

Cardiovascular disease and retinal haemorrhages leading to macular degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PKE associated MRP6 alleles who are then provided with appropriate genetic individuals mine view of the PKE status. The methods are useful for counselling in view of the PKE status. The methods are useful for identifying homozygotes, compound heterozygotes or carriers and thus are useful in the area of genetic testing, carrier detection and prenatal candidangorier, ABCC6 (MRP6) protein belonging to sub-family "C". Since Resistance associated protein 6 (MRP6)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gapa
                                                                                                                                                                                                                                                                                                        identifying homozygotes, compound heterozygotes or carriers involves determining presence of mutation in MRP6 (ABCC6) nucleic acid.
                                                                                                                                                                                                                                                                                     Screening presence of Pseudoxanthoma elasticum mutation useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                  The present sequence represents a human MPR-related ABC transporter (MOAT) protein, designated MOAT-B. The protein comprises a multi-domain structure including a tandem repeat of nucleotide binding folds appended C-terminal to a hydrophobic domain, having Walker A and B ATP binding sites and several potential membrane spanning domains. The MOAT nucleic acids are useful for screening a test compound for inhibition of MOAT mediated transport, indicated by restoration of anticancer drug sensitivity, which in turn causes a reduction of transporter mediated collular efflux of anticancer agents. MOAT DNA or RNA may be used as probes to detect the presence or expression of genes encoding MOAT proteins. Anti-MOAT antibodies are useful for detecting and quantitating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Multidrug Resistance-associated protein 6; macular degeneration; ABCC6; ATP-binding cassette transporter; arterial insufficiency; chromosome 16; Pseudoxanthoma elasticum; PXE; heritable disorder; retinal haemorrhage.

The invention relates to methods and compositions for diagnosing and treating Pseudoxanthoma elasticum (PXE) and PXE associated physiological dysfunctions. The invention is useful for screening for the presence of a PXE mutation. Mutations associated with PXE maps to the ATP-binding C EXE mutation. Mutations associated with PXE maps to the ATP-binding C EXE mutation. Mutations associated with PXE maps to the ATP-binding C C assette transporter ABCC6 (MRP6-Multidrug Resistance associated protein-c C G gene locus on chromosome IG. ABCC6 (MRP6) gene encodes a 165 kba c protein located in the plasma membrane domains. PXE is inherited as an autosomal recessive phenotype or appears as a sporadic phenotype. PXE is a heritable disorder characterises as a sporadic phenotype. PXE is a heritable disorder characterised by mineralisation of elastic fibers in skin, arteries and the retina, that result in dermal lesions with associated laxity and loss of elasticity, arterial insulficiency, cardiovascular disease and retinal heamorthages leading to macular degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PXE associated MRP6 alleles who are then provided with appropriate genetic counselling in view of the PXE status. The methods are useful for connealing in view of the PXE status. The methods are useful for connealing in the part of pa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           transporter, ABCCG (WRP6) protein belonging to sub-family "C". Since ABCCG protein is involved in drug-resistance it is also called Multidrug Resistance associated protein 6 (MRP6)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     useful in the area of genetic testing, carrier detection and prenatal diagnosis. The present sequence is human ATP-binding cassette (ABC)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The invention relates to methods and compositions for diagnosing and treating Pseudoxanthoma elasticum (PXE) and PXE associated physiological dysfunctions. The invention is useful for screening for the presence of a PXE mutation. Mutations associated with PXE maps to the ATP-binding cassette transporter ABCC6 (MRP6 pane encodes a 165 kDa protein located in the plasma membrane containing 17 membrane-spanning chalces grouped into three transmembrane domains. PXE is inherited as an autosomal recessive phenotype or appears as a sporadic phenotype. PXE is a heritable disorder characterised by mineralisation of elastic fibers in Skin, arteries and the retinal hamorrhages leading to macular cassociated laxity and loss of elasticity, arterial insufficiency, associated MRP6 alleles who are then provided with appropriate genetic candividuals in order to identify individuals with one or more PXE individuals in order to identify individuals with one or more PXE counselling in view of the PXE status. The methods are useful for counselling in view of the PXE status. The methods are useful for counselling in view of the PXE status. The methods are useful for counselling in view of the PXE status. The methods are useful for the present sequence is human ATP-binding cassette (ABC) transporter. ABCC6 (MRP6) protein. Note: The present configuration of binding cassette transporter abcc6 (MRP6) protein. Note: The present france is not shown in the specification but is derived from human ATP-figure and the sequence is not shown in the specification but is derived from human ATP-figure.
                                                                                                                                                                                                                                                                                  Human, prenatal diagnosis, dermal lesion, cardiovascular disease, MRP6, Multidrug Resistance-associated protein 6; macular degeneration, ABCC6, ATP-binding cassette transporter, arterial insufficiency; chromosome 16; Pseudoxanthoma elasticum, PXE, heritable disorder; retinal haemorrhage;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Screening presence of Pseudoxanthoma elasticum mutation useful for identifying homozygotes, compound heterozygotes or carriers involves determining presence of mutation in MRP6 (ABCC6) nucleic acid.
                                                                                                                                                                                                                                 Human ATP-binding cassette transporter ABCC6 (MRP6) V1298F mutant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note= "Wild type Val substituted with Phe"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Urban Z,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Boyd CD,
RESULT 13
AAE09367
                                                               The invention relates to methods and compositions for diagnosing and treating Pseudoxanthoma elasticum (PXE) and PXE associated physiological dysfunctions. The invention is useful for screening for the presence of a CPXE mutation. Mutations associated with PXE maps to the ATP-binding cassette transporter ABCC6 (MRP6-Multidrug Resistance associated protein-or or chromosome IG. ABCC6 (MRP6) gene encodes a 165 kDa protein located in the plasma membrane containing 17 membrane-spanning helices grouped into three transmembrane domains. PXE is inherited as an cutosomal recessive phenotype or appears as a sporadic phenotype. PXE is a heritable disorder characterised by mineralisation of elastic fibers in Skin, arteries and the retina, that result in dermal lesions with cassociated lastity and loss of elasticity, arterial insulficiency.

Cardiovascular disease and retinal heamorrhages leading to macular degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PXE associated MRP6 alleles who are then provided with appropriate genetic counselling in view of the PXE status. The methods are useful for carriers and thus are useful in the area of genetic testing, carrier detection and prenatal diagnosis. The present sequence is human APP-binding cassette (ABC) transporter, ABCC6 (MRP6) R1314W mutant protein. Note: The present sequence is not shown in the specification but is derived from human ATP-binding cassette transporter ABCC6 (MRP6) protein [SED ID NO: 3] shown in figure 3 of the specification (AAE09361)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                        Multidrug Resistance-associated protein 6; macular degeneration; ABCC6; ATP-binding cassette transporter; arterial insufficiency; chromosome 16; Pseudoxanthoma elasticum; PXE; heritable disorder; retinal haemorrhage;
                                                            prenatal diagnosis; dermal lesion; cardiovascular disease; MRP6;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    identifying homozygotes, compound heterozygotes or carriers involves determining presence of mutation in MRP6 (ABCC6) nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Screening presence of Pseudoxanthoma elasticum mutation useful for
      Human ATP-binding cassette transporter ABCC6 (MRP6) R1314W mutant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   78.6%; Score 44; DB 4; Length 1503; 50.0%; Pred. The invention relates to methods and compositions for diagnosing and treating Pseudoxanthoma elasticum (PXE) and PXE associated physiological dysfunctions. The invention is useful for screening for the presence of a PXE mutation. Mutations associated with PXE maps to the ATP-binding cassette transporter ABCC6 (MRP6-Multidrug Resistance associated protein-CC 6) gene locus on chromosome 16. ABCC6 (MRP6) gene encodes a 165 kba protein located in the plasma membrane domains. PXE is inherited as an elicosa grouped into three transmembrane domains. PXE is inherited as an elicosa grouped into three transmembrane domains. PXE is inherited as an elicosa grouped into three transmembrane domains. PXE is inherited as an elicosaria resistance and the retina, that result in dermal lesions with a heritable disorder characterised by mineralisation of elastic fibers in skin, arteries and the retina, that result in dermal lesions with associated laxity and loss of elasticity, arterial insufficiency, cardiovascular disease and retinal hemocrahages leading to macular degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PXE associated MRR6 alleles who are then provided with appropriate genetic counselling in view of the PXE status. The methods are useful for identifying homozygotes, compound heterozygotes or carriers and thus are

useful in the area of genetic testing, carrier detection and prenatal diagnosis. The present sequence is human ATP-binding cassette (ABC) transporter, ABCC6 (MRP6) G1302R mutant protein. Note: The present sequence is not shown in the specification but is derived from human ATP-binding cassette transporter ABCC6 (MRP6) protein (SED ID NO: 3) shown in figure 3 of the specification (AAE09361)
                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to methods and compositions for diagnosing and treating Pseudoxanthoma elasticum (PKE) and PKE associated physiological dysfunctions. The invention is useful for screening for the presence of a PKE mutation. Mutations associated with PKE maps to the ATP-binding cassette transporter ABCC6 (MRP6-Multidrug Resistance associated protein-6) gene locus on chromosome 16. ABCC6 (MRP6) gene encodes a 165 kDa protein located in the plasma membrane containing 17 membrane spanning helices grouped into three transmembrane domains. PKE is inherited as an autosomal recessive phenotype or appears as a sporadic phenotype. PKE is a heritable disorder characterised by mineralisation of elastic fibers in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; prenatal diagnosis; dermal lesion; cardiovascular disease; MRP6; Multidrug Resietrance-associated protein 6; macular degeneration; ABCC6; ATP-binding cassette transporter; arterial insufficiency; chromosome 16; Pseudoxanthoma elasticum; PXE; heritable disorder; retinal haemorrhage;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Screening presence of Pseudoxanthoma elasticum mutation useful for identifying homozygotes, compound heterozygotes or carriers involves determining presence of mutation in MRP6 (ABCC6) nucleic acid.

skin, arteries and the retina, that result in dermal lesions with associated laxity and loss of elasticity, arterial insufficiency, cardiovascular disease and retinal haemorrhages leading to macular degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PXE associated MRP6 alleles who are then provided with appropriate genetic counselling in view of the PXE status. The methods are useful for identifying homozygotes, compound heterozygotes or carriers and thus are useful in the area of genetic testing, carrier detection and prenatal diagnosis. The present sequence is human ATP-binding cassette (ABC) transporter, ABCC6 (MRP6) A1303P mutant protein. Note: The present sequence is not shown in the specification but is derived from human ATP-binding cassette transporter ABCC6 (MRP6) protein (SED ID NO: 3] shown in figure 3 of the specification (AAE09361)

Sequence 9, Application US/09792616

Patent No. 6780587

GENERAL INFORMATION:
APPLICAMT: Winversity of Hawaii

TITLE OF INVENTION: Mutations in a gene encoding an ABC transporter (MRP6) causing
TITLE OF INVENTION: Pseudoxanthoma Elasticum
TITLE OF INVENTION NUMBER: US/09/792,616
CURRENT APPLICATION NUMBER: US/09/792,616
CURRENT PILING DATE: 2001-02-23

NUMBER OF SEQ ID NOS: 27

SEQ ID NOS: 27

SEQ ID NOS: 27

SEQ ID NOS: 27

SEQ ID NOS: 27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 3, Application US/09792616

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 4.1.13, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 41173
LENGTH: 24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. Pred. No.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (er) AfCS-Nature Molecule Pages (2004).

-!- FUNCTION: May participate directly in the active transport of drugs into subcellular organelles or influence drug distribution indirectly (By similarity).

-!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).

-!- SIMILARITY: Belongs to the ABC transporter family. MRP subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SMART; SMUCL...

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   J. Hum. Genet. 46:699-705(2001).

-1- FUNCTION: May participate directly in the active transport of drugs into subcellular organelles or influence drug distribution indirectly. Transports glutathione conjugates as Leukotriene-c4. (LTC4) and N-ethylmaleimide S-glutathione (NEM-GS).

-1- SÜBCELULAR LOCATION: Integral membrane protein (By similarity).

-1- TISSUS SPECIFICITY: Expressed in kidney and liver. Very low expression in other tissues.

-1- DISEASE: Defects in ABCC6 are a cause of autosomal dominant pseudoxanthoma elasticum (AD-PXE) [MIM:177850]. PXE is a disorder characterized by calcification of elastic fibers in skin, arteries and retina that results in dermal lesions with associated laxity
                                                                                                                                                                                                                                                                                                                                                                                                                              MEDLINE=20408303; PubMed=10554200; Struk B., Cai L., Zaech S., Ji W., Chung J., Lumsden A., Stumm M., Struk B., Cai L., Kim C.-A., Ji W., Chung J., Lumsden A., Stumm M., Piguera L.E., Fuchs W., Munier F., Ramesar R., Hohl D., Richards R., Neldner K.H., Lindpaintner K.; Ramesar R., Hohl D., Richards R., Mutations of the gene encoding the transmembrane transporter protein J. New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.

Claim 12; Page 80; 149pp; English.

The present invention describes an isolated peptide (I) that binds to and

                                                                                                                                                                                                                                           ö
           have cytostatic, hepatotropic, antiinflammatory, hypotenalve, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for the call surface receptor VEGFR-3 such as cancer, e.g. brain, lung, liver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, skin, head and neck, oesophagus, bone, marrow or blood, and diseases of neovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemangiomas and diabetes. The present sequence represents a specifically claimed VEGFR-3 binding peptide from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes an isolated peptide (1) that binds to and inhibits vascular endothelial growth factor receptor 3 (VGGRR-3). (1) have cytostatic, hepatotropic, antiinflammatory, hypotensive, antiidabetic and valnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and terating disorders mediated by the activity of the cell surface receptor VBGFR-3 such as cancer, e.g. brain, lung,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  angiogenesis; lymphangiogenesis; vascular endothelial growth factor; cytostatic; hepatotropic; antinflammatory; hypotensive; antidiabetic; vulnerary; cell surface receptor; cancer; neovascularisation; liver disease; hypertension; post-trauma; chronic hepatitis; haemangioma; diabetes; PDGF; platelet derived growth factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.
 inhibits vascular endothelial growth factor receptor 3 (VEGFR-3). (I)
                                                                                                                                                                                                                                           Gaps

It selectively inhibits the classical activation pathway of the complement system by binding to IgG. It can be used to treat autoimmune disorders e.g. rheu- matic and other inflammatory disorders, and immuno-complex-related diseases, e.g. extrinsic allergic alveolitis. It may also be used to isolate IgG from blood plasma or serum to reduce the level of IgG, or as immunoassay reagent to determine IgG levels in body fluids. See also AAR14710.
